DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 3 recites the limitation "the feedback" in the claim. There is insufficient antecedent basis for this limitation in the claim.

claim 4 is dependent on claim 3.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 are rejected under 35 U.S.C. 102(e) as being anticipated by Cyrusian et al (6,697,205).

Cyrusian shows:

1. A bias circuit comprising: a reference cell (302, 310, 304, Fig. 3)) to generate a bias signal (VB2); and a first component (308) coupled to the reference cell to adjust the bias signal by replicating a thermal characteristic of a second component (col. 8, lines 10-20) that may be coupled to the bias circuit.

2. A bias circuit according to claim 1 wherein the first component is arranged in a feedback loop with the reference cell (308 & 306 are in feedback).
5. A bias circuit according to claim 1 wherein the first component comprises a transistor.
7. A bias circuit according to claim 1 wherein the reference cell and the first component are coupled together at a summing node (324).

The apparatus described above is applicable to the method claims 9-11, 13.

The limitations of claims 15-6, 18-24 are rejected as above claims.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 6 & 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cyrusian et al (6,697,205) in view of Applicant's Prior Arts and Davis (4,349,778).

Cyrusian discloses the claimed invention except for the reference cell is a ΔV_{BE} cell. Applicant teaches a bias circuit including a bandgap circuit having ΔV_{BE} characteristic is well known the art (col. 1) and Davis teaches a bandgap circuit having ΔV_{BE} characteristic with clamping circuit (col. 3, lines 9-14). It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a

bandgap circuit (320, Fig. 3 & 4) of Cyrusian with a bandgap circuit of Davis with clamping circuit, in order to provide a reference signal having substantially zero differential current.
